

Landing Page Development

Definition: We expect Candidates to develop a page referring to the 'Landing Page' image from test task folder. The required assets, fonts and colour scheme is shared along with 'Landing Page' design. The candidate has to try to replicate the same design into an HTML / PHP page.

The Candidate has to perform below task once done with the HTML part of the page.

- The Candidate has to make one database with the name of ct_CANDIDATENAME. Here CANDIDATENAME will be replaced with your name. Let's suppose candidate name is Abc so the DB name will be ct_abc.
- The Candidate has to store contact numbers of the users who clicks on 'Get the Link' button in 'Download our App' Section in the database.

Note:

1. The practical task should be submitted within the given timeline.
2. You can add animations and interactions as per your choice.
3. The web page development should be responsive.
4. You have to submit the code along with database file in .sql format for us to import and review.
5. You have the liberty to change the section design in responsive layout.
6. You can use third party plugins to develop the page as per your expertise.
